

Creating a whole new world,
we're the one.

An app that brings information and updates maps.

Our Mission

Today's our society is experiencing a rare paradigm shift in human history, from the era of labour and capital to the era of entertainment and trustworthy.

Our company has realised that digitalisation is rapidly progressing in the world, we aim to become a representing leader in Asia to contribute to human beings in the new era of digitalisation.

Even in the new era, the driving force of all things is always the Beat. We believe that we need to start with the right heartbeat to create an organisation that can succeed in this new era.

Social problems emerge

What is the value of a financial institution?

Today, cashless society is becoming more and more advanced. Why are we still asking a financial institution such as a bank to manage your money?

Personal information, assets, personal items, isn't we are in the era of self-managing of our properties has come?

SNS Slander (Cyber-bullying)

A celebrity was hit on SNS. "He can't be helped because there's a famous tax." Is it right? Bullying in schools and workplaces still has not disappeared, so does the internet.

Has the Internet a life-saving place become a thing of the past?

GAFA monopolise the major information

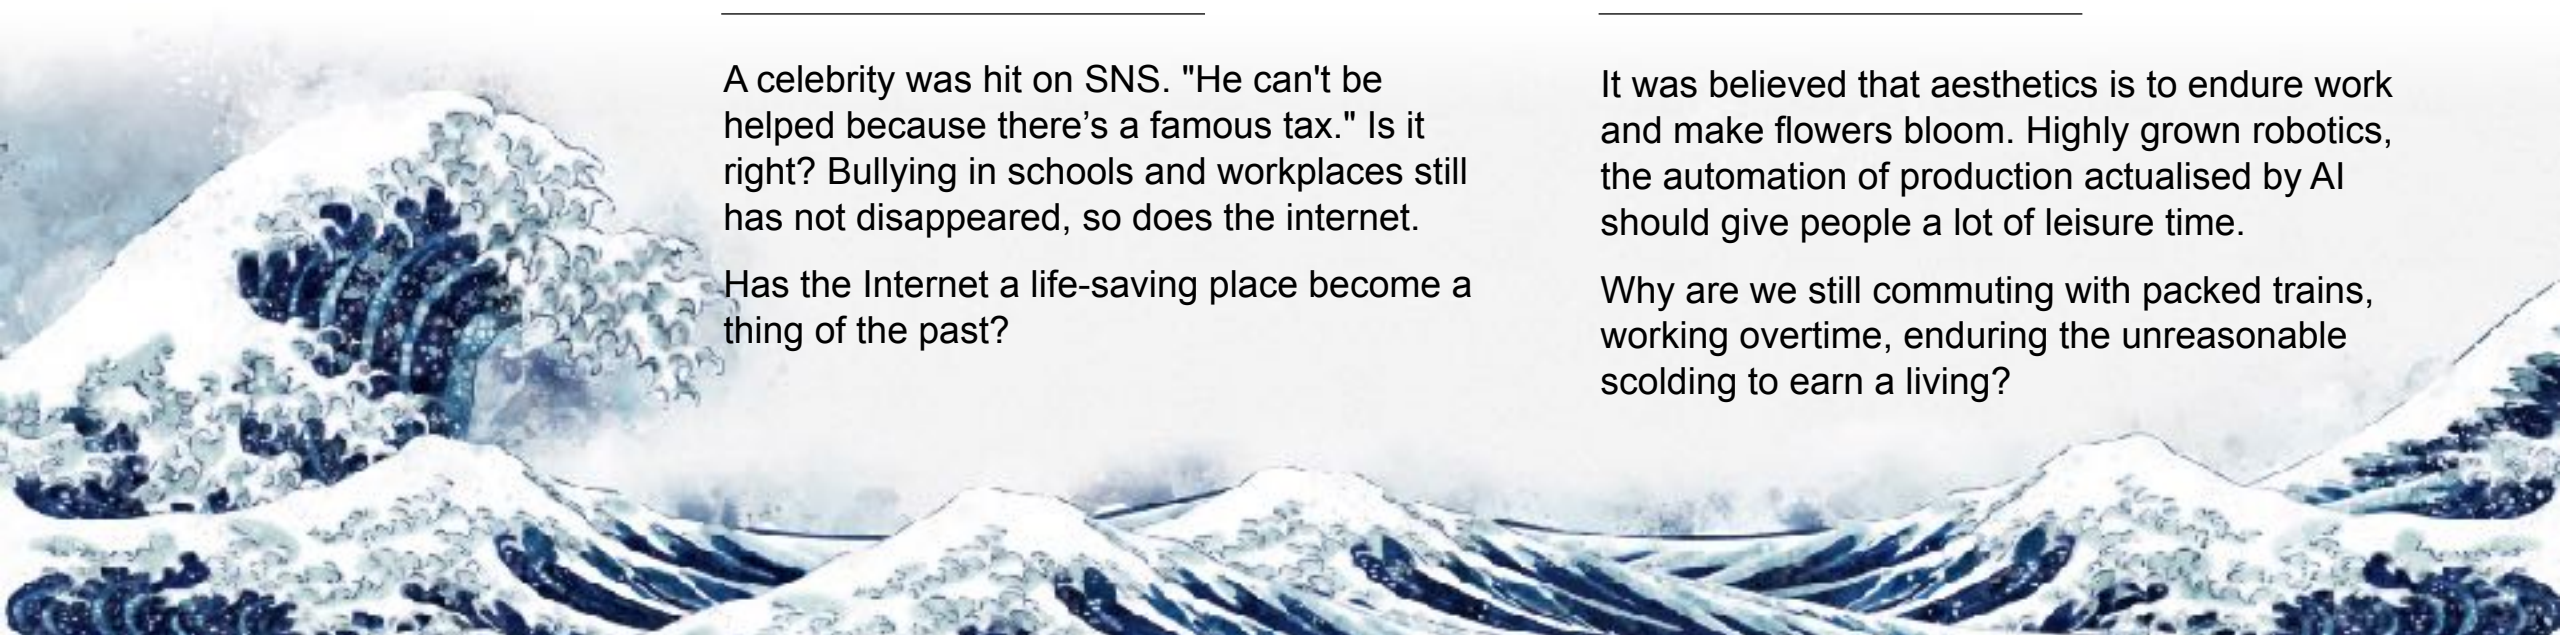

The era in which large companies monopolise information for the cause of technological innovation continues.

Advertising that ignores privacy and continues to appear, violence significantly destroys existing communities. Do we have no choice but to watch over?

Painful work

It was believed that aesthetics is to endure work and make flowers bloom. Highly grown robotics, the automation of production actualised by AI should give people a lot of leisure time.

Why are we still commuting with packed trains, working overtime, enduring the unreasonable scolding to earn a living?

How can Blockchain Technology make society better?

Transparency

Property, health and home are ownable commodity.

And how about information? Who own the information?

Is it healthy to live while you are being exposed to various information risks just to exchange for the convenience?

Block chain makes you own your information.

Protection

A society that is implicitly allowed to attack the weakling by evaluating fame and capital strength.

Essentially, you shouldn't miss someone's scream.

Blockchain gives a great deal of power to the remarks of 4-year-old girls and supports their efforts to protect the well-being of their lives.

Creativity

The Internet where you can easily consume information on SNS. Take is safer, easier and more convenient than Give.

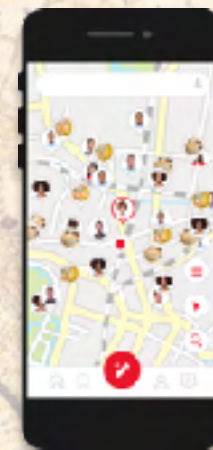

Blockchain reveals how much value it actually created, not a chaotic lie backed by desire for approval.

Blockchain Messaging App Crypto Messenger Wallet (CMWT)

It is a highly privacy-based messaging app that encrypts messages by blockchain and does not require log on of personal information.

You can also create your own economic zone by exchanging personally issued currencies (tokens). It contributes to society whereby "play" and "work" are blended.

Blockchain SNS App Inou

It is an SNS application that writes comments on the map and share each other's recommended spots.

It is managed by the blockchain, and both the person who made the word of mouth and the person who supports it can receive the token. It expresses a new view of the blockchain world of "rewarding people who create information".

I Know

Share everyone what the information I **know**.

I now

Where I am **now**.

WHAT IS INOU?

イノウ

異能 Unique Ability

Discover the **unique ability** of oneself

伊能忠敬

Inou Tadataka

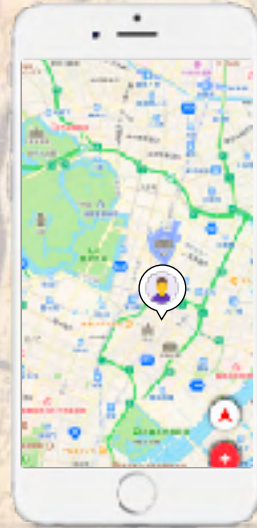

The first person who measures Japan's map

Blockchain SNS App

INO

- ✓ Photos and videos can be posted on iOS and Android.
- ✓ Foreign language build-in translation supported
- ✓ Suggest the nearby posts to you based on your current location by integrated GPS feature.
- ✓ Get Tokens for Crypto Messenger and Wallet

Easily look out for information based on the map

Tap on the Icon and you can browse information which people is talking about.

It does not matter what kind of question, like restaurant, tourist destinations, gym and more.

Tap the place you want to go.

Don't forget to rate for your visit!

Visit as you share it.

If you feel like to rate for a place you go, you can simple post your log on the spot whereby the location information and post information are managed by blockchain technology.

When there's someone engage with your post, you will gain tokens.

The world is getting interesting.

INOUEの3 Features

Creating trustworthy information

The best feature of blockchain is that the post content managed by blockchain cannot be fake.

There is no paying for a comment nor asking someone to write you one. ** how does it gonna achieve

The best appealing of this platform is the trustworthy information.

Creators can be evaluated too

People who post information are supposed to be evaluated more than those who consume Inoue has designed a system whereby creators are properly rewarded by posting.

We aim to create a world full of useful information by connecting among users through communication.

Ownership of information

You can send, edit, and delete information on your own. By blockchain technology, you own your content's rights and the responsibility.

Inoue has adjusted the balance of the information value by linking objective information such as location in addition to the ownership of this information.

Case 1

Is it really a good restaurant?

The restaurant may be charged to you if you try to get more than a certain amount of evaluation on the existing social media. In other words, the rating may not increase if you are not paying for the evaluation/comments. Are you asking an acquaintance about a really good restaurant? It cannot be right? The tool which should be convenient now, it now loses to “traditional word of mouth”

In Inou, information is never manipulated by paid users. We have actualised this world by developing a mechanism/algorithm to respond to the feelings and courage of creator. So, we could find the information of a really good restaurant.

A solid red circle icon.

Case 2

Tourist hotspots x Influencer

Do you experience that when you try to search for the “Recommended tourist hotspots, it came out the same results. As a result of that we will go for Influencer’s recommended location.

This scenario is common for us in digital era. There’s time when it does not get monetise from a tourist hotspot, it moves people with a gratuitous love to introduce. Inou, it is neither to be connected nor disconnected social media, we have devised a mechanism/algorithm that allows the courageous creators who share their favourite stuff to be get appropriate reward/paid.

Heartily asked yourself, don’t you want to challenge Influencer lifestyle with Inou?

Bright future of digital community

Maximise the value of "play"

People who use the online platform as their base of activity and make money that is impossible in the labor market. They never disappear with the trend, but rather the tide does not stop.

If capitalism maximises the efficiency of the economy in our life, then the block chain is the technology that's going to maximise our self-actualisation. It is also possible to form a digital "country" where people and things you like are circulated (*live in), and to live on your own world view. We will continue to provide the technology to materialise the digital world.

It's time for Giver being evaluated.

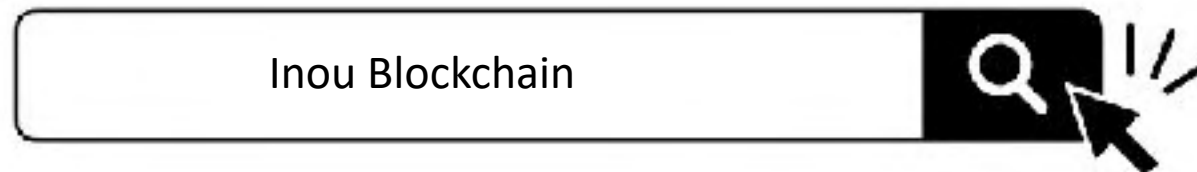

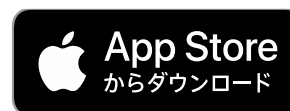

In the existing online community, it is more cost performance to take information than to give it. The price of information is also vague and often causes controversy.

We offer the token function as one solution. By assessing the credibility of information on an axis different from money (legal tender), we will enrich creative activities in the digital community.

Creating a whole new world, we're the one!
